

48WX K **new spading machine** **for loam** **(or loam-like) soil**

[read more](#)

**New
design!**

With over 60 years of experience with Imants spading machines, that expertise is reflected in our machine for loamy soil.

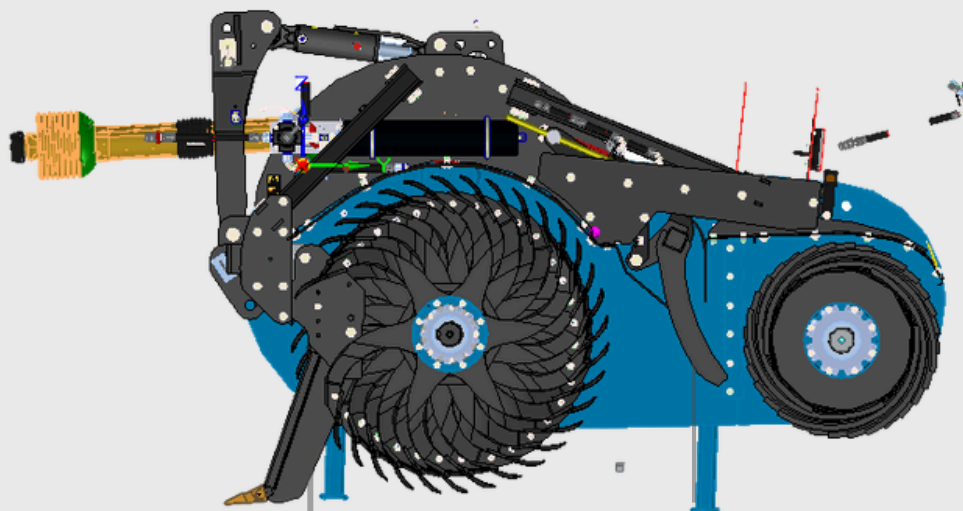

Working with loam can sometimes be a challenge. In dry conditions, the loam becomes tough and hard. This results in clumps that disrupt the seedbed.

At Imants, the focus is on maintaining and improving structure.

- Loosen up layers of compaction,
- mixing loamy topsoil,
- distribute fertilizer and organic matter evenly,
- Prepare a level, uniform seedbed
- Optional: sowing in a single pass

Advantages of the spring-loaded clod rack

◆ Clod rack

The clod rack breaks up larger clods of loam, creating a better soil structure without requiring an additional pass.

◆ Leveling

By breaking up clods, the soil layer is delivered in a flatter state to the powered rake roller.

This allows the rake roller to leave behind a perfect seedbed.

◆ Hydraulic / Spring-Loaded

The clod rack is spring-loaded so that it adapts to changing conditions. The spring pressure can be adjusted hydraulically. In short, less adjustment is needed, yet performance remains consistent.

◆ Optimal seedbed

Flatter and more evenly crumbled: this results in a level seedbed, ensuring uniform emergence and an optimal start for the crop.
